

Paper Plates Collections

Before Playing:

1. You will need two paper plates and twenty counters.

Directions:

1. Put the two plates out. On both plates put a number of counters. The other person has to tell you how many counters are on both plates.
2. Put the two plates out and put a number of markers on each plate. The other person has to tell what plate has a larger number of counters on it or you could do the smaller number of counters.
3. Put the two plates out. On one plate show the number of counters on it. On the second plate cover up the amount of counter BUT verbally tell how many counters you put on the plate. The other person has to tell you how many counters you have in all.
4. Put a certain number of counters under both plates but don't let the other person see how many you have under each plate. Then tell the other person, "I have 13 chips under this plate and 3 chips under this plate. How many chips in all?"
5. The first person to get 15 right answers wins!
